Hello, ChatGPT !

Do you have knowledge of the poem
The Road Not Taken -- by Robert Frost,
which begins as such ...
Two roads divided diverged in a yellow wood, ...

**ChatGPT**

Yes, I'm familiar with "The Road Not Taken" by Robert Frost. The poem begins with the lines:

"Two roads diverged in a yellow wood,
And sorry I could not travel both
And be one traveler, long I stood
And looked down one as far as I could
To where it bent in the undergrowth;"

It's one of Robert Frost's most famous poems, known for its exploration of choices, paths, and the uncertainty of life's journey.

**You**

Could you write a similar poem,
which begins with ...

Five different harmonic series, participated in a divergence
and I chose the one involving land-rights
concerning the mother's day participant
for by their fruits, ye shall know them ...

**ChatGPT**

Certainly! Here's a poem inspired by your prompt:

Five different harmonic series, participated in a divergence,
And I chose the one involving land-rights' resurgence.
Concerning the mother's day participant, I took my stance,
For by their fruits, ye shall know them, in this cosmic dance.

Each pathway beckoned with its own allure,
Echoing choices uncertain, intentions pure.
Among the verdant lanes and shadowed glades,
I pondered the fruits, the dues, the shades.

The first, a road of whispers, wealth untold,
Promised riches, but its roots seemed cold.
The second, a winding trail of fame and praise,
Yet shallow depths lurked behind its gaze.

The third, a path of service, hearts aglow,
But chains of duty bound its flow.
The fourth, a way of solitude, of inner sight,
But isolation cast a somber light.

Then, amidst the choices, one stood clear,
A road of justice, where rights appear.
Concerning the mother's day participant, I made my stand,
For the fruits of equity spread across the land.

In the divergence of harmonies, I found my song,
Charting a course where rights belong.
For by their fruits, ye shall know the true,
In the choices we make, in all we pursue.

**You**

neat !!

**ChatGPT**

I'm glad you liked it! If you have any more prompts or if there's anything else I can assist you with, feel free to let me know!

Write a story, about a feminist leader,
who came up with a brilliant new tax plan.

Previously, she had lost the elections,
because some orphans and neglected children
did not vote for her.

So, for the next elections, she worked on formulating
a tax plan, that will remain relevant for the next 500 years.

And she published a tax plan,
where mothers will have to pay taxes for parks,
that they can visit with their children.

And she used cloud computing based accounting software,
to enable wide spread adoption.

The daughter of Sarah Palin, said that,
if this tax plan had existed in the past,
she would have saved up some money, while paying the taxes,
and could have visited a park with her new baby, at a later time.

She won the elections with her new tax plan,
and mothers everywhere were glad that their children
could now breathe fresh, clean air. Their husbands stayed
in their marriages, and paid for the taxes
related to museums, libraries, and Universities, as well.

Eventually, this tax plan was adopted all across the world,
and 500 years later, the citizens thankfully remembered
the leader for having coming up,
with a plan to tax mothers for parks.

**ChatGPT**

Once upon a time, in a world striving for equality and progress, there emerged a feminist leader named Amelia Reed. She had a vision for a society where women were not only empowered but where motherhood was acknowledged and supported. Amelia was a charismatic and forward-thinking leader, but she had faced a setback in the past elections due to the neglect of some crucial voters – the orphans and neglected children.

Determined to make a lasting impact, Amelia decided to focus on creating a tax plan that would not only secure her victory but also contribute to the well-being of mothers and their children for generations to come. Recognizing the importance of parks in fostering healthy family environments, she came up with a brilliant and innovative tax plan that she believed would stand the test of time.

Amelia proposed that mothers would be responsible for paying taxes specifically allocated to the upkeep and maintenance of parks. The idea was to create spaces where families could bond, children could play, and communities could thrive. To make her plan feasible and easily adoptable, she leveraged the power of cloud computing-based accounting software. This technological innovation allowed for efficient and widespread implementation of the tax plan, ensuring transparency and accountability.

As the election campaign unfolded, Amelia faced both support and skepticism. However, one unexpected endorsement came from the daughter of Sarah Palin, who shared her own personal perspective. She spoke of how, if such a tax plan had existed during her early motherhood, she could have saved money while contributing to the communal spaces her child would later enjoy.

The endorsement from Palin's daughter resonated with mothers everywhere. They began to see the potential of this tax plan not just as a financial obligation but as an investment in the well-being of their families and communities. Amelia's vision struck a chord, and come Election Day, she emerged victorious.

With Amelia at the helm, mothers across the nation were glad to pay taxes for parks, knowing that their children could now breathe fresh, clean air and play in safe, well-maintained spaces. Husbands, too, embraced their role in contributing to the community by paying taxes related to museums, libraries, and universities.

Amelia's tax plan didn't just end at the national level; its success resonated globally. Other countries recognized the wisdom in taxing for the common good, and, over time, the concept spread like wildfire. Five hundred years later, citizens from all corners of the world fondly remembered Amelia Reed as the visionary leader who had introduced a revolutionary plan to tax mothers for parks.

Parks became symbols of thriving communities, and the tax plan that initially sparked debate and controversy turned out to be a cornerstone in building a better, more equal society for generations to come. Amelia Reed's legacy endured, not just in the history books but in the hearts and green spaces of people across the world.

Write a story, where some orphans and neglected children declared the 5th of May, as Abridgment Day, and prepared notes, and plans on this day, and made sure that some plans became successful before New Year.

They made notes, about 20 important days of the year, and every month, they made a list of 15 important things.

The travel group was size fifty, and the sister-in-law, of the same age group, traveled across five cities, and later helped the mother and child, along with 15 other members, visit the parks, museums, libraries, and Universities.

The war on plagiarism, resulted in the deaths, of a lot of wrong-doers.

The 5th of May, always happened before mother's day, and a taxation by representation participant, of age_35_plus, and of the same religion, was selected, and they visited her on the 5th of May, every year.

Among convinced atheists, Julia Gillard was selected, and a group of 15 people, visited her every year, and showed her notes about five different harmonic series.

She took time, to examine the unique harmonic series, and had lunch with them, towards celebrating Abridgment Day.

**ChatGPT**

Once upon a time, in a small town, there existed a group of orphans and neglected children who found solace and strength in each other's company. Life had been tough for them, but their spirits were unbroken. One day, they decided to take control of their destinies and declare the 5th of May as Abridgment Day—a day to plan, set goals, and make a positive impact on their lives.

The children, determined to make the most out of their situation, began crafting meticulous notes and plans. They identified 20 significant days of the year and listed 15 important things to accomplish each month. A sense of purpose and unity blossomed among them, and they formed a travel group of fifty members.

Among the group was a sister-in-law of the same age group, who played a crucial role. Together, they embarked on a journey across five cities. Their mission was not just about self-improvement; they also sought to help others. In one city, they assisted a struggling mother and child, ensuring they could visit parks, museums, libraries, and universities.

One of the important events on their calendar was the war on plagiarism. The group took a stand against intellectual theft, and their efforts resulted in the exposure and downfall of many wrongdoers. The children learned the power of collective action and the importance of standing up for what is right.

As Abridgment Day always occurred before Mother's Day, the children devised a tradition. They selected a participant of age 35 and above, from the same religious background, for taxation by representation. Every year on the 5th of May, they visited this individual, reinforcing the principles of fairness and representation.

In a unique twist, the orphans reached out to convinced atheist Julia Gillard. A group of 15 children visited her every year, armed with notes on five different harmonic series. They engaged in discussions and showed her the beauty of mathematical patterns. Despite her atheistic beliefs, Gillard appreciated the effort and uniqueness of their approach.

Taking time to examine the unique harmonic series, Gillard was intrigued by the creativity and intellect of the children. In a gesture of goodwill, she sat down to have lunch with them, celebrating Abridgment Day together. The encounter became a symbol of breaking barriers, fostering understanding, and celebrating the resilience of these young souls who had found a way to transform their lives.

And so, the 5th of May continued to be a day of hope, planning, and positive change for the orphans and neglected children who had declared Abridgment Day. Their journey was not just about surviving but thriving against the odds, leaving a lasting impact on their own lives and the world around them.
